(54) Title: **USER-SPECIFIC INTERACTION WITH CONTENT STORED ON A UPNP NETWORK**

(57) Abstract: On a UPnP AV network, different users are identified based on respective IP addresses in the SOAP requests for interaction with AV content stored on the network's MediaServers. Under control of the identity thus determined, the relevant MediaServer generates personalized views of the available content, possibly re-organizing content items in the inventory overview or blocking items from being viewed by specific users on the network.
